COMMENTS: Your water lines need to be leveled, in some areas the birds are having to tilt their head to drink. Also some of your feeders looked a little high. Birds on one side are tilting feeder to eat and the birds on the other side can't get to the feed. You floors look great! The laminated sheets that I left your last week need to be put in each house please. I am leaving you a Waste Management sheet. I need to have it back the later than next week please. Also here is a litter hauling form, just wondering if you were cleaning out. Some growers are getting paid between 7 + 9$ a ton for their litter from this place! If you need anything call me. Your projected kill date is May 23rd.

Thanks Megan Fleshman

Hope to meet you soon!

COMMENTS: Jim,
We checked a couple of the houses you off and wai
not ready for chicks. Feed had not been run and water
line pressure was not checked. You pulled all of your feed
trays up at the same time which is going to shock your
chicks. You have the feed on auto but the lighting
program is not set up yet, so your lights are still going on
and off. In house #4 we turned your stretch on
manual. You also need to have your brooder tube
heaters to come on 3 degrees below set temp, not 4.
Call if you need anything.
Thanks, Megan

Birds look good Jim, let's just try to get these few details taken care of.

COMMENTS: Jim,
Rusty and I were out at your farm today and we saw a few things that concerned us. You need to get your irrigation pipes in. Birds are already migrating to the cool end. Our program would like you to have those in by 21 days. I already mentioned to you about setting your feeders to allow more feed to dump in the pan. Our feed now has more pellets in it so the feed doesn't dump into the pan as easily. It will take some time and work but there is nothing any feed setting in those pans when the birds get bigger they will really be fighting to get feed because there isn't enough in the pan. Also, we don't need large piles of litter sitting outside like beside Hs #1. Let me know what your plan is for that. We need to get it moved. Sorry we missed you

Thanks

CURTAIN DROPS HOOKED UP?										

COMMENTS: In Hs#2 the fogger is turned off In Hs#3, hole in agar and feed in spilling in the floor. In Hs#4, leak in fogger pipe in control room + tunnel fan #7 not working. In all the houses you need to push some birds from the cool cell end out because they are too crowded. You are restricting feeder space to some of those birds which will hurt your uniformity In Hs#7 you have 1 tunnel fan not working It's great that you got your migration tubes down, but if you don't keep them bumped up to the sides of the house they are not doing you any good All the water lines look high or low in spots and need to be leveled Mortality looks really good Call if you need anything.

Thanks, Megan

-Get the litter beside house #1 gone!

CURTAIN DROPS HOOKED UP?										

Your projected kill dates are Aug 3rd + 4th + 7th [illegible]

COMMENTS: In House #6 there are some light bulbs out and your feed lines need to be raised. In all the houses I dimmed your lights between 2 + 3, especially when we go to 2 hrs of darkness that is where you need them. The litter that is sitting beside house #1 need to be either gone or covered with plastic before we place birds and get your brick up thermostats set 10 + 12 degrees above + 10 degrees below. I think we have our problems at the beginning when we didn't have the feeders more open. Your weights are a little low. Keep an eye on them. HS#1 - 471 5 - 505 2 - 492 6 - 479 3 - 462 7 - 452 4 - 466 8 - 470

We need to improve push them really hard here at the end

Give me a call

Thanks, Megan

CURTAIN DROPS HOOKED UP?										

COMMENTS: Birds look good Jim Mattalat is still looking good
I left you 2 bottles of Iodine

Remember for next flock: - 4 inches of litter throughout all houses
- extra feed trays for each house.
- Move or cover litter beside HS #1

The feed trays sitting in the control rooms need to be cleaned good before fresh feed is put in them. Mold starts growing on that old caked feed and then the birds eat it. Call me if you need anything Thanks, Megan

*You are not running a lighting program. It's not good for the birds to be all continues light. They don't get a chance to rest which can cause them to be pushed to hard. They can get bad legs, dermititis etc. Please follow one of our programs. I would reccomend 9 hrs of darkness. Our programs are on the laminated venelation sheets in each house.

COMMENTS: Man,

After visiting your farm yesterday and seeing the condition of the birds, I visited with my bosses in our meeting this morning. We have decided to require you to do a complete clean out and pad treatment before we will place birds on this farm again. There are way too many blind birds that cannot even see to eat or drink. This has caused your weights to be down after several consecutive flocks. Our customer's specs is a 6.25 lb bird. We can't keep sending 5 lb birds to the plant.* Also the feedmill has complained that you have been feeding out of both Bins. You need to feed out of one bin at a time. Also they commented on the tall wee

Please take care of these issues. Thanks, [illegible]

COMMENTS: When birds are gone, due to the LT vaccine reaction, ① let houses sit as they are for 10 days with litter undisturbed or ② heat houses up to 100° for 48 hours - Then after either step ① or ②, decake houses and put caked litter in litter stacking shed and leave litter piled up in litter shed for a minimum of 3 weeks before spreading - Do a real good job of decaking and don't leave any caked litter along sidewalls or ends of houses - Take all the caked litter out - After decaking, check litter depth and topdress with shavings or hulls if litter depth is less than 4" anywhere in houses

COMMENTS: - I WOULD STRONGLY RECOMMEND THAT YOU TRY TO PLAN ON DOING A COMPLETE CLEAN OUT OF LITTER AND REPLACING IT WITH AT LEAST 4 INCHES OF SHAVINGS. ALSO, WASH DOWN WITH DISINFECTANT.
- I WOULD, ALSO, LIKE TO SEE YOU USE PAPER UNDER THE WATER LINES AND PUT EXTRA FEED LIDS DOWN - ABOUT 40 PER HOUSE WOULD GIVE YOU A TOTAL OF 200 FEED LIDS TO START CHICKS ON, WHICH WOULD BE ABOUT 100 CHICKS PER FEED LID. THIS WILL GIVE CHICKS A BETTER START AND BOOM HELP WITH EARLY LIVABILITY AND WEIGHT GAIN.

COMMENTS:

	CATCH TIME	OFF FEED
2	11AM FRI	7AM FRI
3		5AM FRI
4		3AM FRI

MIGRATION PIPES ARE NOT PUT OUT, WHICH IS CAUSING THE COOL CELL END TO BE OVER CROWDED. THIS CAN RESTRICT FEEDER & WATER LINE SPACE.

- I WOULD STRONGLY RECOMMEND THAT YOU COMPLETELY CLEAN OUT LITTER & REPLACE IT WITH 4 INCHES OF SHAVINGS. IF YOU CAN'T CLEAN OUT, THEN I WOULD RECOMMEND USING PLT AT A RATE OF 100 LB/1000 SQ FT IN BROOD THE DAY BEFORE PLACEMENT, WHICH WOULD LOWER THE PH OF THE LITTER AND IT WILL REDUCE ANY AMMONIA THAT MAY BE PRESENT

COMMENTS: Man,

I posted several birds and saw several problems. I found bad legs, dermitis, air sac, and some bacteria infections. I really encourage you to clean out ~~the~~ after this flock and do a PLT pad treatment. This will help your bacteria levels and decrease disease problems.

Thanks,

BROILER SUPERVISOR Suzanne

COMMENTS: Man,

Increased mortality seems to be due to several reasons: Bad legs, reaction to LT ~~[illegible]~~ vaccine, bacterial infections & possibly some dermititis coming back. We spoke briefly over the phone about doing a clean out on this side also. I think the clostridial (bacterial) levels in the litter is what is causing the continued problems & increased mortality.

Lights - should be on 8-9 hours darkness at 14/15 days or
Also dim down light some more

COMMENTS: Good mortality during 2nd week

Raise nipple lines a little

Vent doors aren't opening wide enough - close enough doors to get a 2" opening or go to 4 fans on minimum vent - also check hs #4 Only 2 fans are running on min. vent and vent doors aren't opening
Try to get outside litter pile spread as soon as you can or at least get it covered

After catching birds, ① let litter lay undisturbed for 10 days or ② heat litter up to 100° for 48 hours - After either step ① or ②, decake houses and put decaked litter in litter storage shed for a minimum of 3 weeks to let litter heat up before spreading

Check litter depth after decaking and topdress with shavings or hulls if litter depth is less than 4" - Also do a real good job of decaking along sidewalls and at ends of houses - Try to get all the caked litter

COMMENTS: Jesse, We are encouraging growers to put out extra feed trays. 1 per 100 chicks (this is not counting actual feed pans. One pan placed under each chickmate with remainder placed between feed lines & inside water line. The pans not under chick-mates be filled one time & removed once feed is consumed. - Discussed with grower about cake. He is to remove cake in corners and use PLT. Grower assured me that this will be done before chicks are placed Monday @ 10:30 am. Make sure brooders are lit 48 hrs prior to birds & houses are kept 75°- 24 hrs prior raise houses to set temp.

Thanks,
Suzanne

CURTAIN DROPS HOOKED UP?										

COMMENTS: Between flock procedures

1. Decake houses thoroughly (after following LT litter guidelines) Don't leave any caked litter along sidewalls, in corners, or either end - Hand shovel or blade out any caked litter you can't run through the decaker. Check litter depth after decaking and topdress with shavings or hulls to get a minimum litter depth of 4'
2. Do any repairs to equipment or houses that are necessary
3. Clean all feed out of feed bins and feed pans
4. Wash exhaust and tunnel fans, screens & shutters
5. Make sure all brooders and space heaters are working
6. Preheat houses at least 24-36 hours before chicks arrive, (48 hours in very cold weather) Also flush and fill water lines to let way heat up
7. Use PLT - it will more than pay for itself
8. Program controllers properly - Make sure controllers are the same setting between similar houses

CURTAIN DROPS HOOKED UP?										

COMMENTS: - THERE ARE SOME PIECES OF CAKED LITTER THAT NEED TO BE REMOVED IN EACH HOUSE, ESPECIALLY IN THE CORNERS. IF THIS IS LEFT IN THE HOUSE, THEN IT CAN CAUSE MORE AMMONIA, AND LEAD TO HIGHER BACTERIA, VIRUS & OTHER CHALLENGES TO BIRD HEALTH

- HOUSES 3 & 4 HAVE 2,000 LBS OF POULTRY GUARD PUT IN THE WHOLE HOUSE HOUSES 1 & 2 DO NOT HAVE ANY LITTER AMENDMENT.
- HOUSES SET UP ON TEMP & VENTILATION PROGRAM.
- FEED & WATER LINES SET UP & READY. A LITTLE TOO MUCH FEED PUT OUT IN TRAYS IN HS 1 & 2.

COMMENTS: Caked Litter – Take out all caked litter: in corners, under box heaters, along black plastic tubes anywhere there's caked litter bigger than the size of a quarter, take it out – Dump all old feed out of feed pans, auger lines and feed bins; Flush water lines – Wash fan shutters, blades and screens – Litter depth must be at least 4" – You are way under that – probably no more than 1½–2" deep, so you'll need a lot of shavings or hulls spread to get your 4" depth before you get birds – Also gravel must be hauled in and fill up holes in your roads – Cut down weeds and grass around houses

STERLING
POLLARD
12-18-00 35 DAYS

Peterson Farms
P.O. Box 248 • Decatur, AR 72722 • 501-752-5000

Sterling. — House Temp 65° - cool needs to be 75°. I took a look at your chickens and they seem to have some air-sack; especially in houses 1 & 2. I also noticed several culls particularly water bellies. Try to go through all houses and cull pretty hard again. I didn't see too many heart attacks but if you want to cut back your lights; from 10pm to 2am only run lights. I also wanted to remind you to be sure and decake after this flock. Run Oxy-Tet 1pack/1gal and also run citric acid 1pack/2gal together for 3-4 days. Call me if you have any questions.

Remarks

Continue to work on Sealing houses up To help save on fuel Bill. Be sure to have Any coked litter removed from the houses. Have exhaust fans set & syncronized when chicks are placed. 30sec. on timer will probably be enough time. Try to use stir fans. to help move heat out of ceiling. which will Also help on fuel Bill.

Please have houses/floors preheated to 90° 24hours before birds are Placed.

Thanks So Much

Joe

Producer N/L Lincoln **Date** 1/19/06

Comments:

N/L.

After Birds go out, Collect all dead and live birds dispose of them. Close up House + Do Not go in for Seven Days. After Seven Days Debeak as Normal. Out Time will be 14-21 Days

While Out Flush water lines w/ Aqua-Mox or Proxy Clean. We also need to put down PLT. This will help save gas. Call me about how to do this. Georges will pay for 1/2 if applied @ 100# rate to 1/2 house. Will also need to put down Bug Killer. Try to put out Rat Bait to Save insulation.

Thanks

Service Technician

From Previous Flock			
BROODERS	down- ON		

RECOMMENDATIONS Lisa- Temps are cool at 8:00am. I found temps from 70°-84°. The inconsistent temps at this early of an age will have a major effect in the lack of performance- (conversion, weight, mortality + Vamine Reaction). We recommend 106° under brooders + 87-90 thru house. It is also very helpful to remove all cake possible from the house between flocks.

BROILER SUPERVISOR'S REPORT

DATE: 2-19-03 COMPLEX: Sp

FARM NAME: David Cornelison

MORTALITY BY HOUSE TO DATE			
DATE PLACED	HEAD PLACED	TOTAL MORTALITY	AGE
1-30			20
VENTILATION	Curtain is cracked on the south side about 1 ft.		
CURTAIN DROP	(CIRCLE ONE) YES NO	HOOKED UP YES NO	TESTED YES NO
WATER MGMT.			
FEEDER MGMT.	FEED DEPTH	LEVEL	HEIGHT
LITTER MGMT.	GOOD	PATCH CAKE	WET
BROODERS	Curtain cracked & spaceheaters running?		

RECOMMENDATIONS

This is going to get expensive in gas money, plus it is hard to keep floors dry, & chickens health with curtains going ↑ & ↓

Time to clean-out soon, If you are not cleaning this flock be sure to decake really well.

IN THE UNITED STATES DISTRICT COURT FOR THE
NORTHERN DISTRICT OF OKLAHOMA

W. A. DREW EDMONDSON, in his capacity as ATTORNEY GENERAL OF THE STATE OF OKLAHOMA and OKLAHOMA SECRETARY OF THE ENVIRONMENT C. MILES TOLBERT, in his capacity as the TRUSTEE FOR NATURAL RESOURCES FOR THE STATE OF OKLAHOMA,	)
Plaintiff,	)
vs.	) 4:05-CV-00329-TCK-SAJ
TYSON FOODS, INC., et al,	)
Defendants.	)

- -

THE VIDEOTAPED DEPOSITION OF ROBERT TAYLOR, PhD, produced as a witness on behalf of the Defendants in the above styled and numbered cause, taken on the 15th day of July, 2008, in the City of Tulsa, County of Tulsa, State of Oklahoma, before me, Lisa A. Steinmeyer, a Certified Shorthand Reporter, duly certified under and by virtue of the laws of the State of Oklahoma.

EXHIBIT
29

A I'm not sure about that. That's -- that question covers a lot of ground.

Q It's intended to.

A Okay. Ask the question again, please.

Q Will you attempt to testify at the trial of this case that any of the integrator defendants in this case have abused their relationship with those contract growers who grow birds for them? 09:36AM

A I will testify that they have tried to shift risk associated with waste to growers as is reflected in recent contracts compared to older contracts. I'm not sure the word abuse fits. I'm saying I will testify that the integrator has monopsony or oligopsony any power over growers, but that doesn't require abuse either. 09:36AM 09:37AM

Q And what you're referring to, Doctor -- I think in your report you look at contracts 15, 20 years ago, for instance?

A Some less than that.

Q That perhaps do not address the disposition of poultry litter versus newer contracts, which do address the disposition of poultry litter; is that true? 09:37AM

A With the exception of the Willow Brook contracts, I think the latest one was '01 or '02 but 09:37AM

integrator even though the, quote, contracts, end quote, are written for a shorter period of time?

A It may indicate they're happy, or it may indicate that the grower feels he or she has no way out. So I just mean that to me, as an economist, 10:25AM that is a striking feature.

Q And have you spoken to any growers who grow for any of the companies who are defendants in this case?

A As far as I know, I have not talked to any 10:25AM growers in the IRW.

Q Then it would be true that you don't know whether there is a feeling on the part of any grower who grows with any of the defendants in this case that they feel like there's no way out? 10:26AM

A No, and I wouldn't know how to uncover their true thoughts on that.

Q In the last sentence of Paragraph 22 you state, quote, even though there are several integrators in the IRW, the defendant integrators 10:26AM maintain monopsony or oligopsony power over their contract growers extending to waste and dead bird disposal, period, end quote.

A Yes.

Q Tell me what you mean by that. 10:26AM

A I mean that simply because the grower has such an investment in houses and equipment, that generally if the integrator chooses not to deliver birds except for the first flock, they don't have to and if the integrator decides to put a new contract 10:27AM feature in, whatever it may be, can apply waste and dead bird disposal, then the grower has little viable economic option other than to accept it or go bankrupt.

Q But per your previous testimony, Dr. Taylor, 10:27AM you're unable to provide the court or jury in this case the name of any contract grower who one of the integrator defendants has denied birds?

A I have simply not analyzed that. I don't have the data to analyze it. 10:28AM

Q Let's talk about dead bird disposal for a second. How are dead birds disposed of? Tell me the ways.

A Well, there's --

Q In the IRW. 10:28AM

A I do not know now. You know, there have been different technologies through time. Going back in time, some of them were thrown out, and that's probably why disposal of dead bird requirements are in some of the early contracts. They've gone to 10:29AM

I had just scanned those, and there was nothing fundamentally different from other contracts I had seen. So I went back and took a more careful look at those, addressing issues you raised with the -- with one of the Peterson contracts and also 12:34PM
addressing kind of the evolution of those contracts and how waste management -- how or when waste management appeared.

Q Okay. What were the issues with the Peterson contract that you referred to? 12:34PM

A That the growers owned the litter.

Q The Peterson contracts state that the grower owns the litter?

A Let me go back and make sure.

Q I believe that's correct. 12:34PM

A Too many contracts for me to remember. All poultry waste produced by the birds covered by this contract shall be the exclusive property of the contract farmer, and it goes on from there.

Q Okay. So the Peterson contract says the 12:34PM
grower owns the poultry litter?

A It is the only contract I've seen that states the defendant -- that the waste is the exclusive property of the grower.

Q Okay, and it's my understanding from your 12:35PM

prior testimony this morning that you believe that these contract provisions that you've cited manifest the integrators' attempt to shift risk to the grower; is that correct?

A Yes. 12:35PM

Q Explain to me how that risk is being shifted in the context of this Peterson contract where the Peterson grower owns the litter.

A Well, in the -- I don't think I have -- wait. '79 and '86 contracts make no mention of 12:35PM responsibility for disposal or ownership, and then the '04 contract comes in and says it's the exclusive property of the contract farmer. Then it goes on to state how they can use their exclusive property, which -- 12:36PM

Q How does it state they can use their property?

A It says the grower shall be responsible for and receive all of the economic benefits from the use and disposal of said litter. Doesn't mention cost or net benefit, and it goes on to specify -- 12:36PM I'm reading my own. Goes on to specify exactly how the grower is to dispose of litter and waste he or she presumably owns and, as I recall, there's a list of what they're supposed to do with their exclusive property. 12:36PM

Q Okay, and you're referring to the BMPs that are contained within the contract?
A Right.
Q So those were BMPs. Do you know whether the Oklahoma poultry laws and regulations contain any BMPs? 12:37PM
A I think they do, yes.
Q And would those BMPs contain in Oklahoma and Arkansas laws determine how a grower could use its litter? 12:37PM
A It's just strange to me, as an economist, that the contract says it's the grower's exclusive property but then you go on to tell them what they can do with it or can't do.
Q That wasn't my question. I'm saying, wouldn't the litter laws in Oklahoma and Arkansas, which you've stated contain BMPs determine how that grower can use his litter? 12:37PM
A Yes.
Q Okay, and that's going to be independent of anything that's contained in the contract; is that correct? 12:37PM
A As I understand it.
Q Okay, and I believe you previously testified, I believe it was at the preliminary injunction 12:38PM

REPORTER'S TRANSCRIPT OF PROCEEDINGS

FEBRUARY 19, 2008

PRELIMINARY INJUNCTION HEARING

VOLUME I

BEFORE THE HONORABLE GREGORY K. FRIZZELL, Judge

APPEARANCES:

For the Plaintiffs: Mr. Drew Edmondson
Attorney General
Mr. Robert Nance
Mr. Daniel Lennington
Ms. Kelly Hunter Burch
Mr. Trevor Hammons
Assistant Attorneys General
313 N.E. 21st Street
Oklahoma City, Oklahoma 73105

Glen R. Dorrough
UNITED STATES COURT REPORTER

EXHIBIT
30

(APPEARANCES CONTINUED)

For the Cargill Defendants:
Mr. Delmar R. Ehrich
Mr. Bruce Jones
Faegre & Benson
90 South 7th Street, Suite 2200
Minneapolis, Minnesota 55402

For the Defendant Simmons Foods:
Mr. John Elrod
Ms. Vicki Bronson
Conner & Winters
Attorneys at Law
211 East Dickson Street
Fayetteville, Arkansas 72701

For the Defendant Peterson Farms:
Mr. A. Scott McDaniel
Mr. Philip Hixon
Ms. Nicole Longwell
McDaniel Hixon Longwell & Acord PLLC
320 South Boston, Suite 700
Tulsa, Oklahoma 74103

For the George's Defendants:
Mr. Woodson Bassett
Mr. James M. Graves
Mr. Paul E. Thompson
The Bassett Law Firm
Post Office Box 3618
Fayetteville, Arkansas 72701

For the Cal-Maine Defendants:
Mr. Robert F. Sanders
Young Williams P.A.
P. O. Box 23059
Jackson, Mississippi 39225

PROCEEDINGS

February 19, 2008

THE COURT: Be seated, please.

THE CLERK: We're here in the matter of the Attorney General of the State of Oklahoma, et al, vs. Tyson Foods, Inc., et al, Case Number 05-CV-329-GKF. Would the parties please enter their appearance.

MR. BULLOCK: Louis Bullock for the State of Oklahoma.

MS. BURCH: Kelly Burch, State of Oklahoma.

MR. NANCE: Bob Nance for the State of Oklahoma.

MR. BAKER: Fred Baker for the State of Oklahoma.

MR. GARREN: Richard Garren, State of Oklahoma.

MR. PAGE: David Page, State of Oklahoma.

MR. EDMONDSON: Drew Edmondson, State of Oklahoma.

used to -- money from that has been used to replace septic tanks and to do these various measures designed to improve land use practices.

Q. Has the State of Oklahoma engaged in any litter hauling?

A. We have not engaged in litter hauling but we have subsidized litter hauling.

Q. Let me invite your attention to State's Exhibit 47. Could you tell me, please -- do you have that?

A. If it didn't drop to the ground, yes, I do, sir.

Q. How does the incentive program work?

A. There are -- the State pays a subsidy of approximately $10 a ton to move litter out of the Illinois River Watershed. There's also a tax credit that's available for the same purpose. And the litter is not just hauled out of the watershed willy-nilly. We put restrictions on where it can be taken in order to protect the area that receives it.

Q. Are there any prohibitions associated with that program as well?

A. There are.

Q. What would that be?

A. Well, Exhibit 47 shows the areas where the litter that's taken out of the watershed cannot go, either because of a concern about nutrients in those watersheds or because of the vulnerability of the groundwater there.

Q. Do we, as a state, list the water areas that are impaired

A. Well, as much as we -- this is a problem that is -- has its origins on the other side of the border in Arkansas. Eighty percent of the poultry houses are in Arkansas. There is -- our ability to do something in Oklahoma in state court or under state law or under state regulation is very limited, and we could not solve the problem if we were forced to rely entirely or solely on our state authorities.

Q. And in your opinion, how serious is this problem?

A. I consider it a very serious problem.

Q. Could you tell me, please, why you sued the integrators, the companies, instead of the growers, the farmers?

A. Because it is the integrators' waste.

Q. And what do you base that on?

A. The feed that supplies these birds is brought into the watershed and owned by the integrators. The birds that eat that feed are owned -- brought into the watershed and are owned by the integrators. And when nature takes its course and feed enters bird, what comes out the other side is the result of the integrators' actions.

Q. To your knowledge, has that degree of control by the integrators ever been recognized in a court decree?

A. It has.

Q. I invite your attention to State's Exhibit 41. Could you tell me what that is?

A. Yes. This is the decree that resolved the City of Tulsa

case. And by -- I should say more formally it's the case that was brought by the City of Tulsa and the TUMA against a number of poultry companies and an Arkansas municipality over water quality problems in the Eucha-Spavinaw watershed, which is Tulsa's water supply.

Q. Do you know whether there was ever a moratorium on land application leading up to or subsequent to this order?

A. Subsequent to this order. What the order did was require that land application in that watershed not occur until there were new plans written based on a newly adopted phosphorus index. And so from the summer of 2003 when that was implemented, well into and through much of the next year, there was a moratorium on land application in that watershed.

Q. To your knowledge, were any growers or farmers in that case?

A. I don't believe that there was a single grower or a single farmer in that case.

Q. So the named defendants were the companies?

A. The only -- the named defendants were the companies. The order bound them and the result was a moratorium, an effective moratorium, and then an effective change in how it is that litter was managed in that watershed.

Q. And in your opinion, will the risks associated with these bacterial levels be substantially reduced if the injunction is granted?

see it?
A. I've got something on the screen, yes.
MR. RYAN: May I approach the witness?
THE COURT: You may.
Q. (By Mr. Ryan) All right. Now, would you be surprised to find out that there was almost 6,000 miles of state water that were impaired for Enterococcus?
A. That doesn't surprise me, no.
Q. And that just means above EPA standard, right, that's how it becomes impaired for Enterococcus; correct?
A. That's correct.
Q. And you see the little red line that's barely visible?
A. Yes.
Q. That represents the number of miles in the Illinois River Watershed of impairment for Enterococcus versus all the state water. You agree it's a pretty small percentage; correct?
A. It is a small percentage. Scenic rivers are a small percentage of the state's waters.
Q. There are 3,000 miles for E. coli that are impaired in the state. Do you agree with that?
A. I don't have a basis for disputing your figure. That seems -- that's not a surprising number.
Q. And there's 6.2 miles in the Illinois River Watershed that are impaired for E. coli. Do you disagree with that?
A. I don't disagree with it.

Q. And there's almost 3,000 miles in the State of Oklahoma impaired on the basis of the fecal coliform bacteria indicator. Do you disagree with that?

A. I don't disagree with it. I don't have a basis for saying one way or the other.

Q. You understand there's no fecal coliform whatsoever in the Illinois River Watershed?

A. That's not true.

Q. It's not true?

A. I mean, there's certainly fecal coliform in the Illinois River Watershed.

Q. I'm talking about that causes an impairment.

A. I can -- I will accept your representation that that's true.

Q. The -- you've known about this impairment of the IRW waters since 2002; correct?

A. Yes.

Q. You heard me say in opening statement the State has known about this last year and the year before that and the year before that. It's a true statement; correct?

A. Yes.

Q. Did you know this from USGS data, is that your source?

A. That's one of the sources, absolutely.

Q. So in the past six years you've known about the fact that the Illinois River Watershed was impaired due to bacteria;
